From Craft to Code

Where Making Meets Problem Solving

Creating things has always been my favorite way to solve problems. What started as a love for handmade projects has evolved into a passion for thoughtful design and bringing ideas to life through code.

A Different Path, Same Purpose

Although my career has changed course from healthcare to software development, my purpose has remained the same: improving people's lives through meaningful solutions.

C r e a t i o n s

Event Vault

Coming Soon!

A digital cloakroom management system designed to replace paper-based ticketing with a more secure, efficient, and trackable process for event staff and attendees.

Role: Project Manager and Full-Stack Developer

Focus: Project coordination, requirements analysis, system architecture, full-stack development and testing

A full-stack B2C web application that allows users to browse products, manage an account, and complete a simulated checkout experience. I independently designed and developed the application from database to deployment.

Role: Sole Full-Stack Developer

Built with: Next.js, React Node.js Express, PostgreSQL, Prisma, Neon, Tailwind CSS, and JWT Authentication

Deployment: Vercel

Features: Secure authentication, product browsing, user accounts, and mock payments

SproutSpace Marketplace

Ponyo's Ocean Kitchen - Android

A native Android food-ordering application that allows users to browse dishes, create orders and view stored order information. The application uses a local database and demonstrates the core workflow of a restaurant ordering system without processing real payments.

Role: Mobile Application Developer

Built with: Android Studio, Java, and local database storage

Features: Dish browsing, order creation, persistent data and order management

This project was implemented separately for Android and iOS to explore differences in native mobile development, interface patterns and data persistence.

An iOS version of the food-ordering application independently implemented using native Apple development technologies. Users can browse dishes, create and manage orders and retain application data through local database storage.

Role: iOS Developer

Built with: Swift, UIKit, Xcode and Core Data

Features: Dish management, order creation, persistent storage and native iOS navigation

Ponyo's Ocean Kitchen - iOS

SproutSpace Plant Care Prototype

An interactive mobile prototype designed to make shared plant care simpler, more engaging and accessible. The concept combines collaborative household management, task scheduling and gamified feedback to encourage consistent plant-care habits.

Role: UX/UI Designer and Researcher

Designed with: Figma

Key features: Shared household responsibilities, care reminders, task completion feedback, room-based organization and interactive plant status indicators

SproutSpace applies human-computer interaction principles such as intuitive navigation, visual consistency, clear feedback, and reduced cognitive load to create an accessible and engaging plant-care experience for users of different ages and technical abilities.

C r e a t i v e P r o c e s s

Curious

Exploring the problem before jumping to a solution

Collaborative

The best ideas get better when they're shared, shaped, and built together

Intentional

Every design decision should have a reason, big picture and details alike

Organized

Clear plans and useful documentation keep ideas moving towards reality

Tech Toolkit

Languages

JavaScript • TypeScript • Python • Java • C • C++ • Swift • SQL • HTML • CSS

Development Tools

Git • GitHub • VS Code • CLion • Xcode • Android Studio • Jira • Figma

Frontend

React • Next.js • Tailwind CSS • Responsive Web Design

Backend

Node.js • Express.js • Django • REST API Development • JWT Authentication

Databases & Data

PostgreSQL • MySQL • Prisma ORM • Neon

Deployment

Vercel

Experience

Physical Therapist Assistant

Ideal Therapy

Fayetteville, Georgia, USA

March 2022 – December 2023

- Managed treatment plans for pediatric, orthopedic, geriatric, pelvic health, and post-operative patients.
- Collaborated with physical therapists and interdisciplinary healthcare professionals to deliver patient-centered care.
- Performed administrative and clinic management duties to support daily operations.
- Developed strong communication, organization, documentation, and problem-solving skills in a fast-paced clinical environment.

Physical Therapist Assistant

Resurgens Orthopedics

Griffin, Georgia, USA

May 2021 – March 2022

- Treated patients across a broad range of orthopedic and musculoskeletal conditions.
- Worked closely with clinicians to coordinate rehabilitation programs and monitor patient progress.
- Built experience adapting treatment plans to individual patient needs while maintaining accurate clinical documentation.

Physical Therapy Aide

Georgia Bone & Joint

Newnan, Georgia, USA

August 2020 – May 2021

- Assisted physical therapists with patient treatment and clinic operations.
- Maintained treatment areas and equipment while supporting efficient clinic workflows.
- Strengthened teamwork and customer service skills through daily patient interaction.

Additional Customer Service Experience

Hospitality & Customer Service Roles

2015 – 2019

- Delivered excellent customer service in high-volume environments.
- Trained and supported new team members.
- Worked collaboratively within fast-paced teams.
- Developed communication, organization, and time management skills.

E d u c a t i o n

**Bachelor of Information and Communications Technology
Software Development**

Western Sydney University
Parramatta South, NSW, Australia

Expected Completion: November 2026

Current GPA: 6.75 / 7.0

Relevant coursework:

Web and Time-Based Design • Mobile Application Development
Systems Programming • Database Design & Development
Full-Stack Development • Artificial Intelligence • Cyber Security

**Associate of Applied Science
Physical Therapist Assistant**

Lanier Technical College
Cumming, Georgia, USA

Graduated: May 2020
GPA: 3.93 / 4.0

Beyond the Screen

Always Making Something

I've always loved creating things and I usually in the process of making something. Outside of software development, I enjoy designing and building miniature furniture and display scenes, sewing, painting, drawing, crochet, embroidery, and mixed-media projects.

Making Ideas A Reality

I also love curating themed parties and experiences because I enjoy creating worlds people can step into. Whether I'm working with physical or digital media, I find the most satisfaction in taking an idea from concept to creation.
